

AI SOC Analyst Assistant

Malware detected from IP 192.168.1.100 contacting evil.com and attacker@gmail.com

[Analyze Alert](#)[Download PDF Report](#)

Analysis Result

Severity: **High**

Attack: Malware Infection

MITRE: T1204 - User Execution

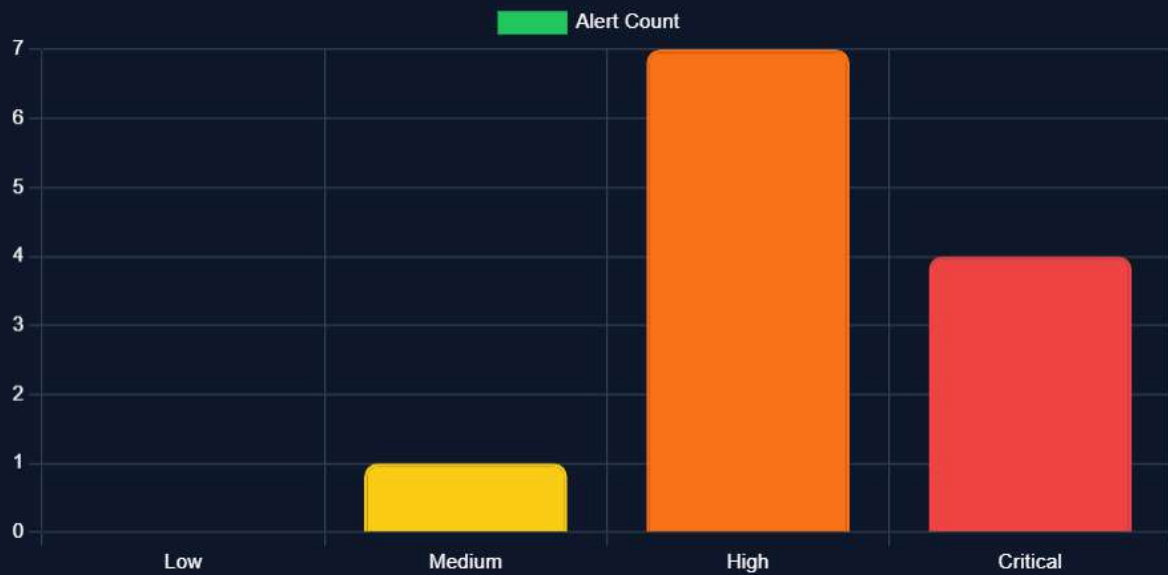

Recommendations

- Isolate infected host
 - Run AV scan
- Investigate lateral movement

Detected IOCs

- 192.168.1.100
 - evil.com
 - gmail.com
- attacker@gmail.com

Alert	Severity	Attack
Malware detected from IP 192.168.1.100 contacting evil.com and attacker@gmail.com	High	Malware Infection
Large data transfer detected. Possible exfiltration to evil.com	High	Data Exfiltration
Reverse shell connection established using netcat.	Critical	Reverse Shell
Privilege escalation detected. User gained administrator access.	High	Privilege Escalation
Command injection detected using cmd.exe execution.	Critical	Command Injection
<script>alert('xss')</script>	High	Cross-Site Scripting (XSS)
Traffic flood detected from multiple IPs targeting web server.	Critical	DDoS Attack
Phishing email from attacker@gmail.com requesting credentials.	High	Phishing Attack
SQL Injection attack detected using OR 1=1 in login form.	High	SQL Injection
Ransomware detected. Files encrypted on host 172.16.1.25.	Critical	Ransomware Attack
